Potential health effects

General

- Acute** : On contact, bifenthrin can cause feelings of burning, tingling or numbness in exposed areas (paraesthesia), which is harmless at low exposure, but can be quite painful, especially in the eye. The effect may result from splash, aerosol or transfer from contaminated gloves. The effect is transient, lasting up to 24 hours, but may in exceptional cases last longer. It may be considered as a warning that overexposure has occurred and that work practice should be reviewed.
- Chronic** : Bifenthrin: Long-term exposure caused neurotoxicity (tremors and impaired gait) in the early exposure in animal studies, but tremors disappeared with continued exposure.

Inhalation

- Acute** : Harmful if inhaled.

Skin

- Acute** : Bifenthrin can cause feelings of burning, tingling or numbness in exposed areas (paraesthesia).

Eye

- Acute** : Bifenthrin can cause feelings of burning, tingling or numbness in exposed areas (paraesthesia). Causes mild eye irritation.

Ingestion

- Acute** : Harmful if swallowed.

- Mutagenicity** : Not classified.

- Carcinogenicity** : Bifenthrin: suspected of causing cancer. Zeta-cypermethrin: suspected of causing cancer.

- Reproductive Effects** : Not classified.
